

## **Attachment A**

1. (original) A protective breathing hood comprising a hood made of a stretchable fire resistant material and which is also impermeable to gases and biologic material, said hood sized and shaped for placing over a head of a user in an airtight manner with an opening of the hood sealingly engaging a neck portion of the user; at least a visor portion of the hood is transparent; and a pair of respiratory units disposed offset with respect to the nose location; each respiratory unit comprising a housing formed with an inhalation flow path accommodating activated charcoal particles, and an exhalation flow path fitted with a one way exhaling valve, and wherein in a donned position of the hood a chamber is formed at a mouth/nose location thereof.
2. (original) A protective breathing hood according to Claim 1, wherein the housing comprises an array of receptacles accommodating the charcoal particles; where each receptacle has an inlet opening and an outlet opening and where at least one of the inlet and outlet opening of each receptacle has a cross-section smaller than a cross-section of the receptacle.
3. (original) A protective breathing hood according to Claim 1, wherein the housing comprises an array of receptacles defined by partitions extending between a proximal wall corresponding with an inside of the hood, and a distant wall corresponding with an outside of the hood; said receptacles accommodating the charcoal particles; the walls comprising openings corresponding with each receptacle and wherein the openings have a cross-section smaller than a cross-section of the receptacle.
4. (original) A protective breathing hood according to Claim 3, wherein the partitions are integral with one of the proximal wall and the distant wall.
5. (currently amended) A protective breathing hood according to ~~one of Claim 2 and 3,~~ Claim 2, wherein the openings are fitted with a grid.

6. (original) A protective breathing hood according to Claim 1, wherein the activated charcoal particles are loose material packed within suitable receptacles.

7. (original) A protective breathing hood according to Claim 1, wherein the activated charcoal particles are loose material embedded within a bedding material received within housing.

8. (original) A protective breathing hood according to Claim 7 wherein the activated charcoal particles are impregnated in a charcoal cloth.

9. (original) A protective breathing hood according to Claim 1, wherein the receptacles are disposed in the form of a honeycomb.

10. (original) A protective breathing hood according to Claim 1, wherein the receptacles have a hexagonal cross-section.

11. (original) A protective breathing hood according to Claim 1, wherein the receptacles have a circular cross-section.

12. (original) A protective breathing hood according to Claim 1, wherein the visor portion is integrally formed with the hood.

13. (original) A protective breathing hood according to Claim 1, wherein the hood is entirely transparent.

14. (original) A protective breathing hood according to Claim 1, wherein the hood is provided with one or more deforming members for deforming the hood so as to form the chamber at a mouth/nose location of the hood.

15. (original) A protective breathing hood according to Claim 14, wherein the deforming member is made of a rigid though pliable material.

16. (original) A protective breathing hood according to Claim 15, wherein the deforming member is articulated to both respiratory units and is foldable about an integral hinge formed at a middle portion thereof.

17. (original) A protective breathing hood according to Claim 16, wherein the deforming member comprises two arms, each articulated to a respective respiratory unit and being normally biased into a spaced apart position.

18. (original) A protective breathing hood according to Claim 13, wherein the one or more deforming members are reinforced ribs integrally formed with the hood.

19. (original) A protective breathing hood according to Claim 18, wherein the hood is integrally molded the reinforced ribs.

20. (original) A protective breathing hood according to Claim 1, wherein the breathing unit is sealingly fitted within an opening formed in the hood and fixed to the hood by a snap-type engagement.

21. (original) A protective breathing hood according to Claim 1, wherein a sealing neck portion of the hood is axially plaited.

22. (original) A protective breathing hood according to Claim 1, wherein the air exhalation flow path and the inhalation flow path are coaxially disposed within a respiratory unit.

23. (original) A protective breathing hood according to Claim 6, wherein the loose activated charcoal particles is granulated material.

24. (original) A protective breathing hood according to Claim 23, wherein the size of the loose granulated activated charcoal particles is about 0.5 to 1 mm.

25. (original) A protective breathing hood according to Claim 1, wherein the

respiratory units further comprise a biologic material barrier disposed in the inhalation flow path.

26. (original) A protective breathing hood according to Claim 1, foldable into a pocket-sized package.

27. (original) A protective breathing hood according to Claim 1, wherein at least a portion of the hood has a distinctive color.

28. (original) A protective hood according to Claim 1, wherein the hood is made of silicone rubber.

29. (original) A protective breathing hood according to Claim 28, wherein the entire hood is transparent.

30. (original) A protective hood according to Claim 1, wherein the exhaling valve is a mushroom-type valve fitted into the housing.

31. (original) A protective hood according to Claim 1, being a disposable one.
